

Maintenance Program

Lawn Maintenance

Yard Art provides award winning, comprehensive lawn maintenance to home owners and commercial clients alike. During the March – November growing season, we provide weekly mowing, edging and string trimming. During the December – February dormant season the schedule is adjusted to bi-weekly visits to insure a uniform, quality appearance all winter long. Maintenance techniques are performed in strict accordance with accepted horticultural norms, using only the highest quality equipment to promote healthy turf and soil.

Tree and Shrubbery Maintenance

As part of our comprehensive lawn maintenance program; all shrubs are pruned as needed in order to keep a uniform appearance. We will also provide periodic light pruning of trees.

Bed Maintenance

In addition to edging of all hard surfaces, we will keep your beds in top condition by maintaining a defined edge on them as well as eliminating weeds during each visit.

General Cleanup

Attention to detail is what separates Yard Art from the rest. At each visit, we pick up all trash and debris from the lawn and beds. All drives, walks, porches, patios and decks are blown clear of clippings. All other debris which we collect are disposed of off property.

Additional Services

Pinestraw and Mulch

Keep your beds fresh year round with Spring and Fall applications of pinestraw or mulch.

Annuals

Allow Yard Art to paint some color into your landscape with the addition of seasonal bedding plants. We can select from a wide variety of annuals and use only the highest quality nursery stock from local providers.

Design, Landscaping, Lighting and Irrigation

Yard Art has certified landscape designers on staff available to draw custom plans for your lawn. We also offer a full range of professional installation and repair services for your landscaping, lighting and irrigation needs.

Turf Program

Early Spring Treatment

Pre-emergent weed control for crabgrass and other warm season weeds plus our exclusive blend of bio-stimulants to get your lawn off to a healthy start.

Spring Treatment

Pre-emergent weed control repeated for season long control, our blend of bio-stimulants, and premium balanced fertilizer with iron and other minors for maximum greening

Early Summer Treatment

Post emergent weed control, our blend of bio-stimulants and a fertilizer custom formulated to provide thicker turf and roots needed to combat the summer heat and potential drought.

Summer Treatment

In addition to our bio-stimulant package, a slow release fertilizer is added to maintain the rich color and density of your lawn. A preventative application of insecticide is applied to protect your investment from damage.

Late Summer Treatment

A preventative application of fungicide is added to our bio-stimulant and fertilizer mix to optimize disease control.

Early Fall Treatment

Pre-emergent weed control is applied to prevent cool season weeds from invading your lawn. Our bio-stimulant package ensures that your lawn remains healthy while it prepares for dormancy.

Fall Treatment

Final application of pre-emergent ensures season long control as the bio-stimulants encourage root growth even as the lawn goes dormant.

We Also Offer . . .

The Shrub Protection Plan

Provide your shrubs and even your annuals the same level of protection that you provide your lawn. We use a unique blend of fertilizers, bio-stimulants and micro-nutrients to keep your shrubs at their healthy best. Protection from common insects such as scale and aphids is provided as well as our "Bloom Booster" to maximize color.

The Tree Protection Plan

New and old trees alike can benefit from our program designed specifically for trees found in the Lowcountry. Healthy roots lead to healthy trees, so we deep root "feed" your trees with controlled release fertilizers, bio-stimulants and all natural humates to build the soil. This plan is essential for newly planted trees and trees damaged by construction.

The High Stress/New Turf Package

This program is designed for newly sodded lawns or lawns which are highly stressed due to drought, high traffic, or other environmental factors. Granular and foliar amendments are added to our custom program to boost root growth and help your lawn get off to a great start.

Fire Ant Treatment

Our Fire Ant eradication program utilizes Top Choice Fire Ant Control which gives you a guaranteed 1 full year without fire ants. Top Choice also provides season long control of Mole Crickets and up to 4 months control of Fleas. (Safe for use on playgrounds.)

Fungicide

Our Lowcountry humidity creates ideal conditions for fungal growth such as Brown Patch, Take-all-Patch and Leaf Spot in your lawn. We use proprietary computer software modeling as well as careful field observation to time the application of our blend of systemic and contact fungicide. A must for St. Augustine lawns.

Soil Sample Analysis

Optimize your Yard Art Annual Program with a chemical analysis of your soil. Many nutrients cannot be utilized by the plant unless soil conditions are right. We will test your soil for pH, compaction, potassium and phosphate as well as a host of minor elements.

Core Aeration

Root and plant development can be severely restricted by compacted soil. Alleviate this problem by having us aerate your lawn to encourage root growth and allow for better penetration of air, water and fertilizers.

Over-Seeding

Enjoy a green lawn all winter long with winter rye grass.
